“Hyperion Park” is a suburb of Northern Chicago, located near but not on Lake Michigan. The city is home to a military base. According to the 2000 census, the population was nearly 36,000. The racial makeup is 47% white, 36% black, 18% Hispanic, with a mix of other races making up the rest. The per capita income of the city was $14,500. 15% of the population was below the poverty line. Hyperion Park High School serves the community, and is the school for which I am developing this collection. It is a four year high school. The school population is 860 students. 83.8% are from low income households. The school is split evenly between males and females (50.1% male; 49.9% female). 51.1% of the student population is black, 45.6% is Hispanic, 2.3% is white, and a mix of other races makes up the remainder.

The scenario of this project is that a new class is being developed that will cater to students interested in the following disciplines (from the Imagineering Field Guides): Show/Concept Design and Illustration, Show Writing, Architecture, Interior Design, Engineering, Lighting Design, Graphic Design, Prop Design, Sound Design, Media Design, Landscape Architecture, Show Set Design, Character Paint, Character Plaster, Dimensional Design, Fabrication Design, Special Effects, Production Design, Master Planning, Research & Development, Construction Management, as well as assorted Culinary aspects.

These are also the same types of studies that Walt Disney Imagineering is interested in. This class will focus its studies on The Walt Disney Resort in Central Florida, its history, how it was built, the science behind its attractions, its hospitality lessons, its architecture, its layout & travel planning that goes with it, its culinary aspects, what imagineers do, and the hidden details that are behind its perfection. The class will culminate with a week long trip to the resort to study the lessons learned in real world environments, and to meet an Imagineer in person. By the end of the course, the students will have learned enough to be considered “mini-imagineers”.

To compliment this class, the school’s library will develop a core collection of materials related to the learning objectives of this class. This collection will include books, DVDs, CDs and MP3 audio files.

Because of the uniqueness and specific nature of this collection, I searched for titles related to Walt Disney World and Imagineering on large, well-known merchandise web sites such as Barnes & Noble and Amazon.com. I also relied on my own first hand expertise and knowledge of the subject. Each of the titles considered were cross-referenced with book reviewing web sites to help gauge their usefulness and quality. Additionally, I had to make judgment calls on how each item would relate to the class being taught. Some titles might have been high quality and well-reviewed, but would not have made sense for the classroom setting. Where possible, I have included review information in the annotations on the Pinterest site. The attached works cited page does not include the annotations. Also, cost information can be found on the Pinterest site as well.

At the end of this Disney World class, and by incorporating these core collection elements into the learning process, these students will have a thorough knowledge of the Walt Disney World resort, and the large number of professional opportunities that exist there in many fields of expertise.

If your workplace is located within the city, living in the city nearby would also make for a shorter commute than driving in from the suburbs. If you do not have means of transportation, living in the city might be ideal as you can rely on public transportation, biking or walking to get to work. While suburbs have typically been home to primarily middle-class, there has been a shift in recent years. In 2017, the average city saw a demographic shift as more people flocked to suburbs. The suburbs can be filled with beautiful parks and recreation centers, but cities will offer you a plethora of restaurants, museums, concerts and more. Consider living near your work and places where you enjoy spending time.

5. School Districts. Like New York, Chicago is a city of skyscrapers. Chicago's tallest buildings are the John Hancock1 Tower (or "Big John", as they call it), the Standard Oil Building ("Big Stan") and the Sears Tower2, which is the tallest building in the world. Although Chicago is situated far away from any ocean, it is famous for its beaches. Most of the area along Lake Michigan is taken up by beaches and parks. New Orleans. New Orleans is not a typical American city. It is a city, the main business of which is pleasure. Los Angeles is a rapidly-growing city. Its suburbs are not really suburbs: they have developed many businesses of their own. Los Angeles keeps spreading out into farmland and even desert. Los Angeles's growth is supported by its diverse economy.
