Edited by the world renowned Leon Speroff and an eminent reproductive endocrinologist, Mark Fritz, this is one of the most referred to textbooks in endocrine gynecology.

This seventh edition, although of more than 1300 pages, responds clearly to all topics of clinical practice in a very synthetic and readable style, also very appropriately illustrated.

Besides the complete explanation of the female endocrine system, the text addresses also the question of management of its disorders, offering practical guidance on disorder-management with up-dated evaluation-algorithms and treatment options.

This new edition includes the latest trends in contraception, infertility, as well as the new guidelines on hormone replacement therapy during menopause.

Hopefully, this new edition will soon be completed with the handbook version, as was the case with previous editions, making even easier for the practitioner to stay in touch with the state-of-the-art guidelines in clinical gynecologic endocrinology and infertility.

Leon Speroff, Portland, Oregon

Twenty-nine years ago, my fellowship training in Reproductive Endocrinology with Leon Speroff began. I was Leon’s first fellow, arriving in Portland, Oregon in 1981, eager, excited, and determined. The next 2 years, in many ways, shaped all of those that have followed.
