Quantitative Research in Education
Intermediate & Advanced Methods

DIMITER M. DIMITROV
George Mason University

Whittier Publications, Inc.
New York
This book offers a comprehensive presentation of quantitative research design and statistical methods in the context of education and related fields. The text is intended primarily for use by students who take intermediate and advanced quantitative research courses as a part of their graduate degree program, but it can be a useful resource for researchers in education, counseling, rehabilitation, psychology, sociology, social work, and human development as well.

The main purpose of this book is to provide the readers with an in-depth conceptual and methodological understanding of intermediate and advanced quantitative research methods, as well as the skills necessary to apply such methods using SPSS and to interpret the results. This is achieved by building layers of context-based understanding of research concepts and methods, their statistical translation, methodological principles, computer-based data analysis, presentation of the results in APA style format, and contextual interpretations. The text allows people who experience difficulties with analytic representations of statistical concepts to capitalize on conceptual understanding and still be able to master the research tools necessary for their work on theses, dissertations, and professional research.

While there are many excellent introductory books on research design and statistics in education and the social sciences, most books at the intermediate and advanced levels tend to be either too technical and mathematical or too simplistic. Typically, claiming to have an "applied orientation," such books are dominated by presentations of SPSS dialog boxes and printouts at the expense of theoretical and methodological rigor. To bridge the gap between these extremes, this book attempts to provide a balance between conceptual meaning and its statistical translation by developing understanding and application skills in a spiral exposure to quantitative concepts and methods. For example, the comparison of groups on variables of interest is addressed in a sequence from univariate cases of t-tests, nonparametric methods, and analysis of variance (ANOVA) to scenarios illustrating the use of multivariate analysis of variance (MANOVA) and structural equation modeling (SEM). As another example, the concept of validity is addressed in the framework of measurement, research design, and structural equation modeling. Particular attention is devoted to potential problems associated with violation of assumptions, common misconceptions (e.g., conducting MANOVA versus separate ANOVAs), effect sizes, confidence intervals, and sample size. The book is organized in four parts comprising 24 chapters. Each chapter ends with a summary and study questions.

**Part I [Measurement in Educational Research]** consists of three chapters. Chapter 1 presents variables and measurement scales in the context of education. The focus is on the nature of measurement in education, types of variables, types of scales and their transformations, permissible arithmetic operations with scale values, summation symbols, and basic rules of summation. Chapter 2 introduces the classical model of reliability of scores, types of reliability, and reliability of composite scores. Chapter 3 deals with the concept of validity for measurement instruments (e.g., tests, questionnaires, or inventories) and types of validity (content-related validity, criterion-related validity, and construct-related validity).

**Part II [Research Design]** consists of two chapters. Chapter 4 deals with research problems, hypotheses, and types of quantitative research: nonexperimental research, experimental research, and threats to internal and external validity. Chapter 5 presents pre-experimental and true experimental research designs that involve quantitative methods of data analysis. The focus is primarily on conceptual understanding and methodological principles underlying the application of such designs in educational research.
Part III [Univariate Statistics in Educational Research] consists of fourteen chapters. The first five of these chapters (6, 7, 8, 9, and 10) cover introductory statistics and prepare the ground for understanding and practical applications of intermediate statistics in educational research. The next six chapters (11 through 16) provide intermediate treatment of correlation, regression, and analysis of variance (ANOVA) including some nonparametric methods. The last three chapters in this section (17, 18, and 19) provide more advanced treatment of multiple regression, analysis of variance, and the relations between them.

Part IV [Multivariate Statistics in Educational Research] consists of five chapters. This part covers the topics of logistic regression, multivariate analysis of variance (MANOVA), exploratory factor analysis, confirmatory factor analysis, and elements of structural equation modeling (SEM). The analytic framework of these topics is simplified and tailored to conceptual understanding, computer-aided applications, and interpretations in the context of educational research.

Supplements
Data sets for computer-based applications in examples using SPSS can be downloaded from the online supplement to this book [http://cehd.gmu.edu/book/dimitrov]. This supplement provides also (a) answers to the study questions for each chapter, (b) addendum to some topics discussed in the book, (c) syntax for confirmatory factor analysis, path analysis, and group comparison on latent variables in the framework of major computer programs — LISREL, AMOS, EQS, and Mplus [used for illustrations in Chapters 23 and 24], and (d) additional references (books, articles, and online products) related to the content of this book.

Acknowledgments
I would like to acknowledge the assistance of my graduate research assistant, Jill Lammert, who provided valuable editorial comments and suggestions throughout the writing of this book. I also appreciate the feedback and encouragement of colleagues from different universities as well as graduate students who used draft chapters of this book in quantitative research courses that they took with me in the Graduate School of Education at George Mason University.

Contents

Preface xv

PART I  MEASUREMENT IN EDUCATION 1

Chapter 1  VARIABLES AND MEASUREMENT SCALES 3
1.1 Variables in Educational Research 3
  1.1.1 Observable versus Latent Variables 4
  1.1.2 Continuous versus Discrete Variables 4
1.2 Scales of Measurement 5
  1.2.1 What is Measurement? 5
  1.2.2 Nominal Scale 6
  1.2.3 Ordinal Scale 6
  1.2.4 Interval Scale 6
  1.2.5 Ratio Scale 7
  1.2.6 Scale Transformations and Operations 7
  1.2.7 Scaling of Individual Items 9
1.3 Symbols and Rules for Summation of Variables 9
  1.3.1 Symbolic Notations 9
  1.3.2 Summation Operator 10
1.4 Summary 11
1.5 Study Questions 13

Chapter 2  RELIABILITY 15
2.1 What is Reliability? 15
2.2 Classical Concept of Reliability 16
  2.2.1 True Score 16
  2.2.2 Definition of Reliability 16
  2.2.3 Standard Error of Measurement 17
2.3 Types of Reliability 18
  2.3.1 Internal Consistency Reliability 18
  2.3.2 Test-retest Reliability 19
  2.3.3 Alternate Forms Reliability 20
  2.3.4 Criterion-referenced Reliability 20
  2.3.5 Interrater Reliability 22
2.4 Reliability of Composite Scores 23
  2.4.1 Reliability of Sum of Scores 23
  2.4.2 Reliability of Difference of Scores 24
2.5 Reliability Estimation with SPSS 25
2.5.1 Calculation of Cronbach’s alpha 25
2.5.2 Calculation of Cohen’s kappa 26
2.6 Summary 27
2.7 Study Questions 28

Chapter 3

VALIDITY 29
3.1 What is Validity? 29
3.2 Aspects of Construct Validity 30
3.2.1 Content Aspect of Validity 30
3.2.2 Substantive Aspect of Validity 31
3.2.3 Structural Aspect of Validity 31
3.2.4 Generalizability Aspect of Validity 32
3.2.5 External Aspect of Validity 33
3.2.6 Consequential Aspect of Validity 34
3.3 Summary 35
3.4 Study Questions 35

PART II RESEARCH DESIGN 37

Chapter 4

QUANTITATIVE RESEARCH 39
4.1 Research Questions and Hypotheses 39
4.2 Types of Quantitative Research 41
4.2.1 Nonexperimental Research 41
4.2.1.1 Descriptive research 41
4.2.1.2 Correlational research 42
4.2.1.3 Ex post facto research 43
4.2.1.4 Meta-analysis research 43
4.2.2 Experimental Research 45
4.2.2.1 True experimental research 45
4.2.2.2 Quasi-experimental research 46
4.2.2.3 Single-case research 46
4.2.3 Internal and External Validity in Experimental Research 47
4.2.3.1 Threats to internal validity 47
4.2.3.2 Threats to external validity 48
4.3 Summary 50
4.4 Study Questions 51
Chapter 5

BASIC RESEARCH DESIGNS 53

5.1 Pre-experimental Designs 53
  5.1.1 One Group Posttest-Only Design 53
  5.1.2 One Group Pretest-Posttest Design 54
  5.1.3 Nonrandomized Control Group Posttest-Only Design 54

5.2 True Experimental Designs 55
  5.2.1 Randomized Pretest-Posttest Control Group Design 55
  5.2.2 Randomized Solomon Four-Group Design 56
  5.2.3 Randomized Control-Group Posttest Only Design 57

5.3 Quasi-Experimental Designs 58
  5.3.1 Nonrandomized Pretest-Posttest Control Group Design 58
  5.3.2 One Group Time-Series Design 59
  5.3.3 Control Group Time-Series Design 60

5.4 Summary 61
5.5 Study Questions 63

PART III UNIVARIATE DATA ANALYSIS 65

Chapter 6

REVIEW OF INTRODUCTORY STATISTICS 67

6.1 Organizing and Graphing Data 67
  6.1.1 Frequency Table 67
  6.1.2 Basic Distribution Graphs 68

6.2 Describing Distributions 72
  6.2.1 Percentiles 72
  6.2.2 Measures of Central Tendency 74
    6.2.2.1 Mode 74
    6.2.2.2 Median 74
    6.2.2.3 Mean 74
    6.2.2.4 Properties of the mode, median, and mean 75
  6.2.3 Measures of Variation 75
    6.2.3.1 Variance 76
    6.2.3.2 Standard deviation 76
    6.2.3.3 Pooled variance 77
    6.2.3.4 Some basic rules 77
  6.2.4 Standard Scores 78
  6.2.5 Scale Transformation 79

6.3 Summary 80
6.4 Study Questions 82
Chapter 7

**BASIC DISTRIBUTIONS**  83

7.1 Normal Distribution  83
  7.1.1 What is a Normal Distribution?  83
  7.1.2 Basic Properties of the Normal Distribution  85
  7.1.3 Determining Percentiles and Percentile Ranks  86
  7.1.4 Sampling Distribution of the Mean  87
  7.1.5 Normal Q-Q Plot  89

7.2 Student’s *t*-Distribution  91

7.3 *F*-Distribution  92

7.4 Chi-square Distribution  93

7.5 Summary  94

7.6 Study Questions  95

Chapter 8

**HYPOTHESIS TESTING**  97

8.1 What is Hypothesis Testing?  97

8.2 When To Reject (or Not) the Null Hypothesis?  98

8.3 Testing Hypotheses about the Mean  100
  8.3.1 One-sample Case for the Mean  100
  8.3.2 Two-sample Case for the Mean: Independent Samples  106
  8.3.3 Two-sample Case for the Mean: Dependent Samples  111

8.4 Summary  113

8.5 Study Questions  114

Chapter 9

**HYPOTHESIS TESTING FOR PROPORTIONS**  117

9.1 One-Sample Case for Proportion  117

9.2 Testing H₀: \( P_1 = P_2 \) for Independent Samples  122

9.3 Testing H₀: \( P_1 = P_2 \) for Dependent Samples  127

9.4 Summary  131

9.5 Study Questions  132

Chapter 10

**CORRELATION AND SIMPLE REGRESSION**  135

10.1 Correlation between Two Variables  135
  10.1.1 What is Linear Relationship (Correlation) between Two Variables?  135
  10.1.2 The Pearson Product-Moment Correlation Coefficient  138

10.2 Simple Linear Regression  144
  10.2.1 Correlation, Prediction, and Causation  144
  10.2.2 The Regression Line  144
Chapter 14

**ONE-FACTOR ANALYSIS OF VARIANCE**

14.1 The Concept of One-Factor Analysis of Variance 218
14.2 Assumptions in ANOVA 219
14.3 Effects in One-factor ANOVA 220
14.4 Within-groups and Between-groups Variance 221
14.5 Linear Model for One-factor ANOVA 223
14.6 Testing the ANOVA Null Hypothesis 223
14.7 Multiple Comparisons 225
   14.7.1 Post Hoc Comparisons 225
   14.7.1.1 The Tukey method of multiple comparisons 225
   14.7.1.2 Bonferroni method of multiple comparisons 226
   14.7.2 Planned Comparisons 227
   14.7.2.1 Contrasts for planned multiple comparisons 227
   14.7.2.2 Dunnett method of multiple comparisons 228
14.8 Determining Effect Size 230
   14.8.1 Effect Size of Mean Differences 230
   14.8.2 Omnibus Effect Size 230
14.9 Determining the Sample Size 234
14.10 Consequences of Violating the ANOVA Assumptions 234
14.11 Interpretation of SPSS Output for One-factor ANOVA 236
14.12 Summary 238
14.13 Study Questions 239

Chapter 15

**TWO- AND THREE-FACTOR ANOVA**

15.1 Two-factor ANOVA 241
   15.1.1 Null Hypotheses in Two-factor ANOVA 241
   15.1.2 Assumptions in Two-factor ANOVA 242
   15.1.3 Effects in Two-factor ANOVA 243
   15.1.4 Linear Model for the Data in Two-factor ANOVA 245
   15.1.5 Sum of Squares in Two-factor ANOVA 246
   15.1.6 Mean Squares in Two-factor ANOVA 247
   15.1.7 Testing the Null Hypotheses in Two-factor ANOVA 248
   15.1.8 Omnibus Effect Size in Two-factor ANOVA 249
   15.1.9 Types of Interaction in Two-factor ANOVA 251
   15.1.10 Testing for Simple Main Effects 252
   15.1.11 Using SPSS for Two-factor ANOVA 252
15.2 Three-factor ANOVA 257
15.3 Summary 264
15.4 Study Questions 265
Chapter 16

ANALYSIS OF COVARIANCE  

16.1 The Logic Behind ANCOVA  
16.1.1 Basic Concepts in ANCOVA  
16.1.2 Adjusted Group Means in ANCOVA  
16.1.3 Increased Test Power with ANCOVA  
16.1.4 Assumptions in ANCOVA  

16.2 Performing ANCOVA and Interpreting the Results  

16.3 ANCOVA versus ANOVA on Gain Score  

16.4 Summary  

16.5 Study Questions  

Chapter 17

MULTIPLE REGRESSION AND ANOVA  

17.1 One-Factor ANOVA via Multiple Regression  
17.1.1 Contrast Coding for ANOVA with Two Groups  
17.1.2 Contrast Coding for One-factor ANOVA with Three Groups  
17.1.3 Orthogonal Contrasts  

17.2 Two-Factor ANOVA via Multiple Regression  

17.3 Summary  

17.4 Study Questions  

Chapter 18

ANOVA WITH RANDOM FACTORS  

18.1 ANOVA with One Random Factor  
18.1.1 Random Effects  
18.1.2 Assumptions of the Random-factor ANOVA  
18.1.3 Expected Mean Square in the Random-factor ANOVA  
18.1.4 The Primary Question in a Random-factor ANOVA  

18.2 Two-factor Mixed-Effects ANOVA Model  
18.2.1 The Concept of a Mixed-effects Model  
18.2.2 Assumptions of the Two-factor Mixed ANOVA Model  
18.2.3 Expected Mean Square in the Two-factor Mixed ANOVA  
18.2.4 Effect Size of Mean Differences among Levels of the Fixed Factor  
18.2.5 Generalizations with the Two-factor Mixed ANOVA  

18.3 Summary  

18.4 Study Questions  

Chapter 19

REPEATED-MEASURES ANOVA  

19.1 A Simple Repeated-Measures ANOVA
PART IV  MULTIVARIATE DATA ANALYSIS  329

Chapter 20

LOGISTIC REGRESSION  331

20.1 The Concept of Logistic Regression  331
   20.1.1 Probability, Odds, and Odds Ratio  331
   20.1.2 The Logistic Model  333
   20.1.3 Logit Form of the Logistic Regression Model  334
   20.1.4 Interpretation of the Regression Coefficients  334

20.2 Tests and Interpretations of Logistic Regression Results  336
   20.2.1 Goodness-of-fit Tests  336
   20.2.2 Hosmer-Lemeshow Goodness-of-fit Test  337
   20.2.3 Test for Significance of Predictor Variables  338
   20.2.4 Effect Size Information with Logistic Regression  339
   20.2.5 Classification Table  341

20.3 Coding Categorical Predictors  342

20.4 Using SPSS for Binary Logistic Regression  343

20.5 Comparison of Full and Restricted Models  347

20.6 Selection of Predictors in Logistic Regression  348

20.7 Assumptions in Logistic Regression  349

20.8 Summary  349

20.9 Study Questions  351

Chapter 21

MULTIVARIATE ANALYSIS OF VARIANCE  353

21.1 The Concept of MANOVA  353

21.2 MANOVA versus Separate ANOVAs  354

21.3 When to Use Separate ANOVAs?  354

21.4 When to Use MANOVA?  355

21.5 Assumptions in MANOVA  355

21.6 MANOVA with Discriminant Analysis  356

21.7 MANOVA with Planned Comparisons  361

21.8 Sample Size in MANOVA  366
Chapter 22

EXPLORATORY FACTOR ANALYSIS 369
22.1 Correlated Variables and Underlying Factors 369
22.2 Basic Concepts in Exploratory Factor Analysis 370
22.3 Communalities and Eigenvalues 372
22.4 The Principle Factor Method of Extracting Factors 373
22.5 Rotation of Factors 374
22.6 Determining the Number of Factors 376
  22.6.1 “Eigenvalues of one or higher” Criterion 376
  22.6.2 Scree Test 377
  22.6.3 Parallel Analysis 378
22.7 Using SPSS for Exploratory Factor Analysis 379
22.8 Summary 383
22.9 Study Questions 384

Chapter 23

CONFIRMATORY FACTOR ANALYSIS 387
23.1 Differences between EFA and CFA Models 387
23.2 Basic Steps for CFA 389
  23.2.1 Specification of the CFA Model 389
  23.2.2 Evaluation of the CFA Model Adequacy 390
23.3 Summary 397
23.4 Study Questions 398

Chapter 24

ELEMENTS OF STRUCTURAL EQUATION MODELING 401
24.1 Path Analysis 401
  24.1.1 Path Coefficients 402
  24.1.2 Exogenous and Endogenous Variables 403
  24.1.3 Assumptions 404
  24.1.4 Decomposition of Correlation Coefficients 404
  24.1.5 Testing the Causal Model for Data Fit 406
    24.1.5.1 Just-identified models 406
    24.1.5.2 Overidentified models 407
24.2 Elements of Structural Equation Modeling 412
  24.2.1 Upgrading Models for Path Analysis to Typical SEM Models 412
  24.2.2 Comparing Groups on Latent Variables (Constructs) 413
    24.2.2.1 SEM versus MANOVA 413
    24.2.2.2 Factorial invariance across groups 414
My question is about why quantitative research in Education seems to continue to be the mainstream strategy for the most part of researchers. In other words, why does qualitative studies still have so little expression in the scientific literature in the field of Education? We will continue to share our understanding of this issue. thanks. Cite. Deleted profile. From a health education perspective, significant research often results from competitive grant funding that is often underpinned by a medical or managerial model of education within a national or regional funding framework. In these pa
