Who Really Invented Television?
Revisionists history says RCA, but in truth it was a Mormon farm boy named Farnsworth. His struggles presaged the battle between Bill Gates and Netscape.

Who invented television and when was it invented? Read all about Philo Farnsworth, John Logie Baird and the history of television to get the answers. Have you ever wondered about life without television? What if you cannot watch any of your favourite shows—only listen to the radio for some entertainment! We should be thankful to Philo Farnsworth for inventing the first all-electronic television. Philo Farnsworth. Philo was always intrigued by machines. When he was still a kid, scientists were talking about inventing a television; a machine which will have sound and moving pictures. Ask History: Who Really Invented the Light Bulb. The James Bond Acrostar Jet. Subscribe for fascinating stories connecting the past to the present. The automobile was first invented and perfected in Germany and France in the late 1800s, though Americans quickly came to dominate the automotive industry in the first half of the twentieth century. Henry Ford innovated mass-production techniques that became standard, and Ford, ...read more.

Thomas Edison. I mean not just who was credited for it in history, but who really invented the television set. I always thought it was in 1926 by John Logie Baird, but this American guy I work with says it was all Paul Gottlieb Nipkow’s idea and Baird just stole it and took the credit. Update It was John Logie Baird a Scotsman who invented television as we know it today in 1925. He sent pictures between Glasgow and London in 1927. Nipkow was a German who used a metal disc to scan pictures and this was developed later to be used when sending telegrams like many things e.g Leonardo Da Vinci who could be credited with designing the first helicopter or the computer for example, Babbage was the first but these were later streamlined and developed by others.
